The FabLab is a place of **relationship and sharing** that connects students, young professionals, professors and business, creating synergies, facilitating the exchange of ideas and the creation of projects. The machines and technologies of digital fabrication are means to bring together in the same physical place people's creativity and ideas.

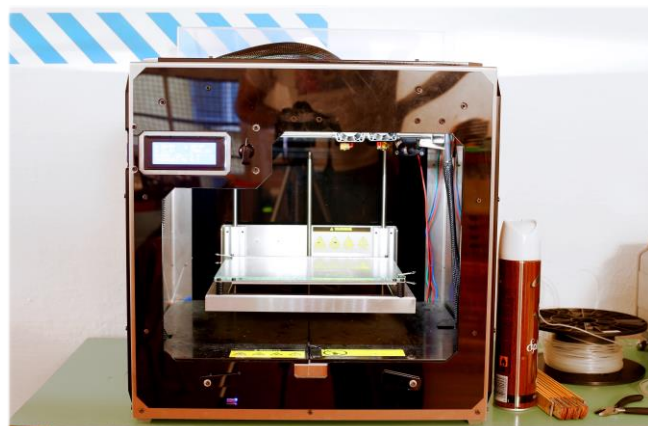

The man and his imagination are the focus of The FabLab, 3d printers, milling machines, plotters and other digital tools are the frame of this project: a return to humanism and make.

LEARN

The first task of The FabLab is to be a **public space**, a place for everyone. In this way, through the support in the lab, people get closer to the universe of the digital fabrication.

It's about learning together a new alphabet, a different way to design and communicate, that will help us to give a new life to our relations and our projects

Finally, the most ambitious of our goals: turn your ideas and projects into **real products**.

With shared languages and tools, in different professions who exchange ideas and suggestions, we are convinced that will be possible to see a new way of thinking about the product.

The FabLab is an innovation driver.

Through the use of tools of digital fabrication you can rapidly prototype, test and improve your products.
